

# Chiller Efficiency Program

## Description

If you own or manage a large office building, hotel, hospital or institutional complex, high rise apartments, or any business with a chiller based air-conditioning system, LADWP's Chiller Efficiency Program (CEP) can significantly help cut down your energy costs. CEP offers rebates for all types of chillers, ranging from air-cooled to water-cooled.

## Benefits

CEP provides rebates of up to \$193 per ton, and is designed to spur large business or institutional customers to convert to higher efficiency chiller systems throughout the LADWP service area. In most cases, the rebate will fully cover the incremental cost of upgrading to a more efficient system.

Participation in this program typically reduces the electricity cost of cooling without sacrificing people's comfort or incurring the expense of a more efficient chiller.

CEP improves the payback period and return on investment for these projects, making them more attractive to the

decision-makers. Other benefits include reducing greenhouse gas emissions from fossil fuel energy generation, which contributes to climate change.

## Qualifications

To qualify, applicants must meet the following conditions:

- Must be an LADWP non-residential electric customer in good standing
- All projects require a pre-inspection and approval prior to installation
- Rebates are reserved on a first-come, first-served basis until funds are exhausted
- Projects not completed within 18 months of LADWP pre-approval may be cancelled and reserved rebates returned to the program fund

## How to Apply

Detailed instructions on how to apply, our application, and program forms are available at our website [www.ladwp.com/cep](http://www.ladwp.com/cep).
